HORNET TRAP

HIGHLY EFFECTIVE TRAP*

Specially developed to trap Asian hornets

- The yellow bowl colour is known to attract Asian hornets.
- The shape of the trap concentrates the odour of the attractant and allows a better diffusion and efficacy.
- The trap lid provides two entrances, both covered with a tunnel that focuses and directs odours, shields ambient light, and prevents hornets from escaping.

*The trap is easy to use
and specially designed to attract
hornets and prevent them
from escaping.*

*Comparative evaluation of the trapping methods to protect the apiary - French Technical Institute for bees and pollination (ITSAP) - June 2015.

ATTRACTANT SOLUTION

MAXIMISE ATTRACTION BY ASIAN HORNETS

- **Natural trapping solution**
based on plant extracts.
- **No pesticide.**
- Formulated not to attract bees.

Available in 2 formats :

- Single dose (10ml)
- 1-litre bottle

We recommend the use of the Véto-pharma trap, even if it is not mandatory to use our attractive solution. On the other hand, the quantities and conditions of use mentioned correspond to the use with the Véto-pharma trap. Traps containing the attractant should be placed in places out of reach of the public and children. Guarantee: In case of use of the product out of recommendations, Véto-pharma declines any responsibility.

Contains ethanol. Keep out of sight and reach of children and pets. Store in a dry place at room temperature. Do not swallow. Avoid contact with eyes or skin. In case of contact, rinse thoroughly with water. If swallowed or in contact with eyes, consult a physician and bring the label or the product with you.

TIPS FOR USE

Position traps in areas where asian hornets fly
(hives, swimming pools, terraces, shelves, trees, etc.)

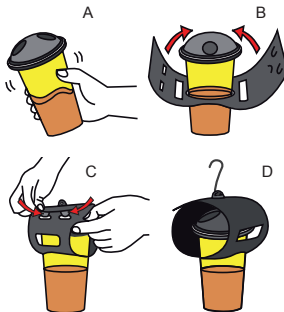

- **In height:** traps hanging from a branch
(1.5 to 3 metres from the ground)
- **Close to flight boards:**
On the ground or on a support

Number of traps depending on the number
of hornets per hive:

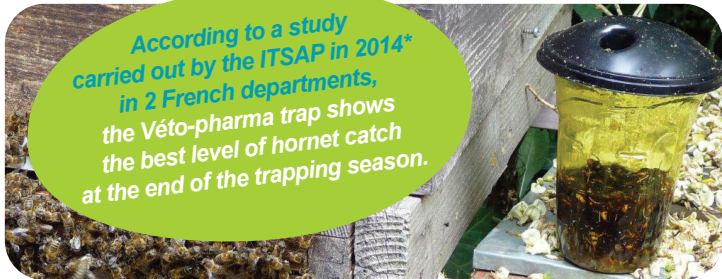

2 hornets per hive = 1 trap for 2 hives

3 to 5 hornets per hive = 1 trap per hive

5 hornets per hive = 3 traps for 2 hives

According to a study
carried out by the ITSAP in 2014*
in 2 French departments,
the Vêto-pharma trap shows
the best level of hornet catch
at the end of the trapping season.

*Comparative evaluation of the trapping methods to protect the apiary
French Technical Institute for bees and pollination (ITSAP) - June 2015.

1

Thoroughly mix the following ingredients in the trap bowl:

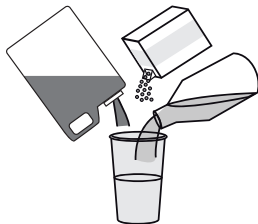

10ml of attractant

50g of sugar

200ml of water

2

At saturation of hornets or 3 weeks after placement, **renew the solution** without rinsing the bowl of the trap.

- It takes a **few hours** for the traps to catch hornets.
- If the traps do not catch any hornet, **it may be useful to reposition them.**
- It is recommended to trap when the maximum **daily temperatures exceed 15 °C.**
- It is recommended to trap **in areas of passage** of the Asian hornet.
- For better efficiency, **do not clean the trap** during the renewal of the solution.
- When renewing the attractive, we recommend to **leave a dead hornet in the trap.**

WHEN TO USE THE TRAPS?

SPRING TRAPPING

OBJECTIVE:

Limit the number of founders and therefore the number of future nests, and thus help to reduce the pressure of autumn attacks.

Caution: Spring trapping must be done in a targeted manner to reduce the risk of trapping other species. Traps should be placed on Asian hornet ways: near apiaries, near the site of old nests, etc.

AUTUMN TRAPPING

OBJECTIVE:

Decrease the pressure of the Asian hornet in the apiary, which is high at this time because the hornets look for a food rich in sugar. **This trapping must be heavily put in place to protect the colonies likely to be strongly attacked and depopulated.**

Protect your hives,
terraces, pools,
gardens ... from
Asian hornets
